

Scanning Acoustic Microscopy Technician – Irvine, CA

Evans Analytical Group, LLC (EAG) is a leader in providing microelectronics failure analysis services to organizations worldwide. The EAG worldwide lab network provides failure analysis, reliability, ATE and calibration and analytical services. It's fast paced, technically challenging environment where you will have an opportunity to use your advanced experience.

We are looking for a technician who can help us meet our customers' goals. Responsibilities for this role include independently work with external customers in drafting efficient customer work requirements and completing the stated tasks in a timely manner. This is position will require that you independently perform hands-on microelectronic device package scanning acoustic microscopy. The ideal candidate would also have experience with related materials analysis and characterization tools and techniques. Prepare effective analysis reports with accurate and detailed data. Provide technical advice and/or direction to other analysts on team projects. The ideal candidate will be energetic and enthusiastic and have a strong sense of responsibility. This position requires a solid technical foundation and a least, 1 yr hands-on materials analysis or microelectronics environment experience.
